

Team:

I am a BSc Management Sciences student from LUMS, Pakistan and doing my project alone.

Concept:

I am using Twitter from last few months. One thing I always wished to do is to download the data and analyze it.

I made a Twitter weather analysis tool for new reporters which will update them about recent weather around the world. This weather analysis tool will help a weather news reporter to gather weather reports live by what people are saying on Twitter.

My tool gives location of tweets, sentiment analysis and key words through the use of Azure Cognitive services.

Target market:

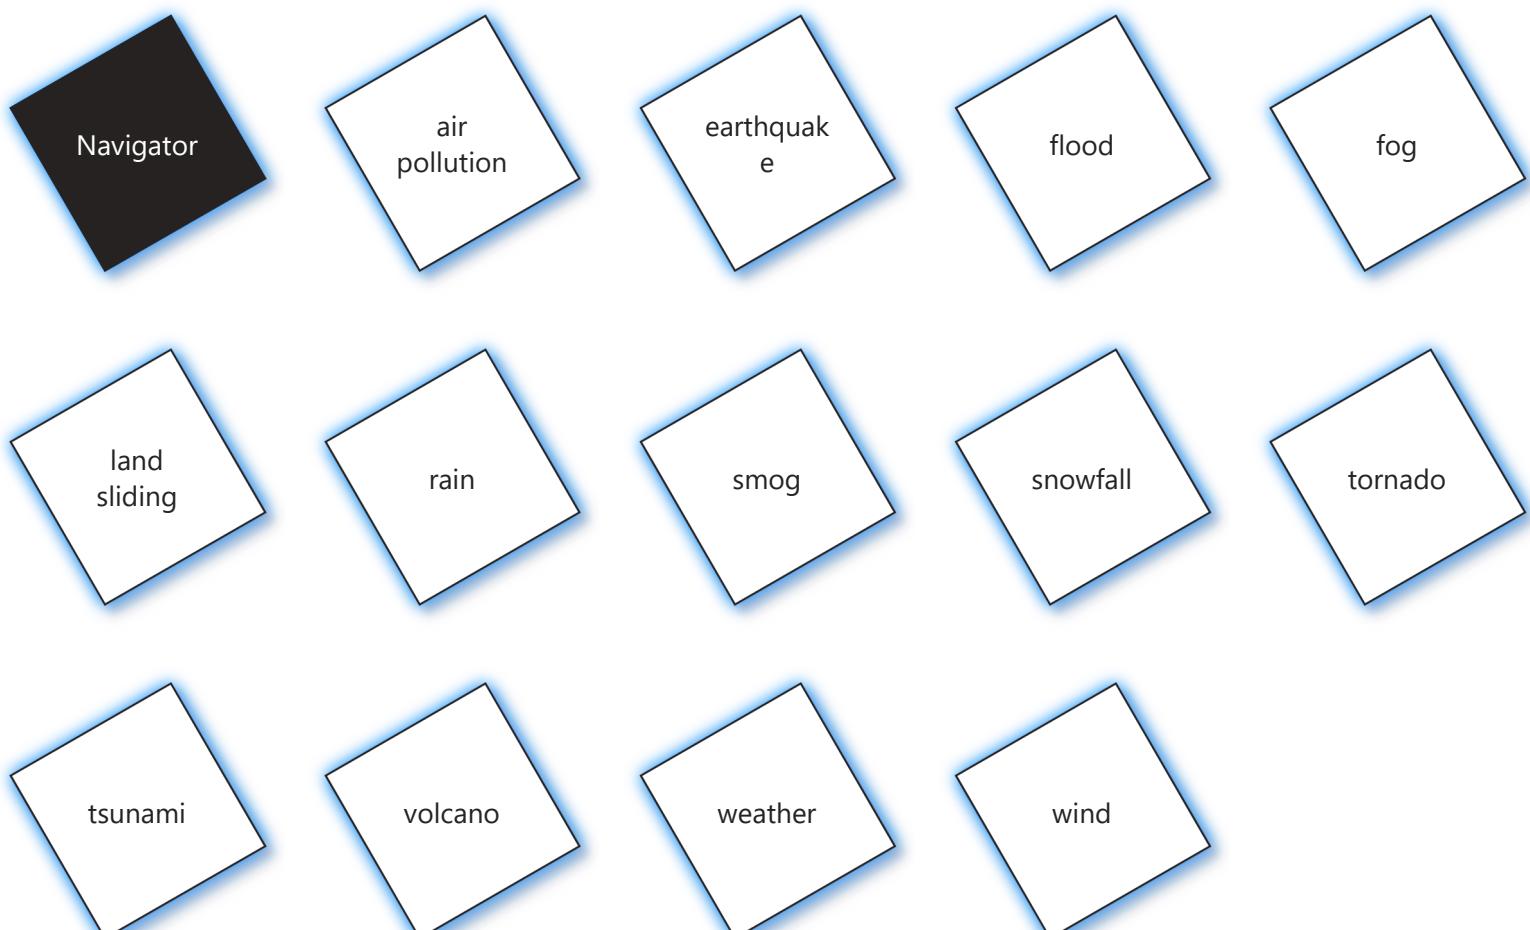

My target market is media channels.

Business plan:

My Twitter Analysis tool can be modified to what people are talking about politics and political parties during elections. It can also be modified to product performance analysis tool for example instead of weather, I can check which web series people are talking on twitter and what are they talking.

In case of political parties election tool, my tool provide me a good money if sold to any political party during elections season.

Social Media Weather Analysis Tool
